

I would just like to say that XM radio far exceeds any expectations that I would have ever had from a radio. Since we pay for it, there are no commercials.

One of the best features is the local weather and traffic. I get stuck in traffic daily and I like to know the reason. As with FM there are commercials every 20 minutes so sometimes you have to wait 20 minutes to get a traffic update.

So basically, I think that you, the FCC, should think about rejecting NAB's petition 04-160 and allow XM to give us out local weather, news and traffic reports.

Thank you for reading
